

Convert Notes to SQL

Situation

The decision is made; your Lotus Domino environment will be phased out and to keep access to important business information the Lotus Domino data needs to be migrated to for example SQL.

Lialis has the software, experience, expertise and the personal touch to guide your organization through this difficult project.

The Lialis Convert Notes to SQL maps and transfers the content in your Lotus Notes applications (text, rich text, attachments) to any RDBMS, for example SQL.

Features

- Lialis Notes 2 SQL is a server based system running on a Domino R85 server
- Supports conversion of text, rich text and attachments to any RDBMS
- Includes delta functionality, clients can run (for example) weekly updates
- Creates the RDBMS tables automatically or allows client to make a mapping between the Notes fields and the existing RDBMS tables.
- Suitable form small to very large and complex conversions
- Includes data integrity analysis, to make sure each value is converted properly
- Can be tailored to meet your specific demands
- Direct and personal support
- Can convert any version and type of Notes database
