

Restore Folders

Situation

A Lotus Notes user calls you in panic; 'I accidentally removed an important folder in my mail file and now ... '. If you have implemented the Restore Folders solution for Lotus Notes mail you think 'no problem', you open the solution, select the folder and click the restore button and your user is happy again.

If you don't have implemented the Restore Folders solution the restore process can be complex and time consuming. Shorten and simplify this process by implementing the solution. You then only have to recover the removed folder from a backup database and your user can copy the folder locally to the new database. And the next time a user calls, you just have to click the restore button.

Features

- Recover removed folders in Lotus Notes mail files by just clicking one button
- Simple identification of removed folders
- Documents are attached again automatically to the recovered folders
- Upload folders from a (local) mail file and restore folders to a (server based) mail file
- Full Lotus Notes solution, suitable for R7 and R8
