

Change Manager

Situation

Your complex Lotus Domino environment maintenance is growing over your head. Too many tasks to perform, too many processes to monitor, too many problems to solve, but where do you start?

With Change Manager for Lotus Domino you will be supported during problem solving, monitoring and maintaining a high quality level (ITIL/SOX/Auditing compliance) for your Lotus Domino environment.

You have the ability to make configuration snapshots, compare server configurations from multiple Lotus Domino servers, validate directories, perform domino server change, keep control over lotus domino server configuration, benchmark and verify and approve changes being made by other administrators in the Domino Directory.

Features

- Easy implementation by yourself
- Keep track of any type of change in your entire Lotus Domino environment
- Extended domino monitoring functionalities
- Support for Lotus Domino servers R6, R7 and R8
- Compare multiple Lotus Domino server configurations
- Enhance the security of your Lotus Domino environment
- Be alerted in case of problems and log them
- ITOL/SOX/Auditing compliance
